

Jiteen Mohanty

Software Engineer | Spring Boot • REST APIs • Microservices

+91-9348051139 jiteen.dev@gmail.com LinkedIn Portfolio

Professional Summary

Software Engineer with 2 years of experience developing enterprise backend applications, REST APIs, database solutions, and business process automation systems. Expertise in data processing workflows, API development, and software engineering principles. Hands-on experience building Java Spring Boot applications, implementing secure RESTful services, workflow-driven systems, and scalable backend architectures. Passionate about AI-assisted engineering, distributed systems, and modern Java technologies.

Technical Skills

Languages	Java, JavaScript, Dart
Core Java	OOP, Collections Framework, Exception Handling, Java 8+ Features
Backend & Frameworks	Spring Boot, Spring MVC, REST APIs, Flutter
Frontend	React, Component Architecture, REST API Integration
Databases	SQL Server, Oracle, MySQL, MongoDB
Database Engineering	Stored Procedures, Indexing, Execution Plans
Tools & Cloud	Maven, Git, GitHub, Postman, AWS – S3, IAM (working knowledge)
Methodologies	Agile/Scrum, SDLC, Code Reviews
AI Tools	Claude Code, Codex, Model Context Protocol (MCP)

Professional Experience

Hansa Solutions <i>Associate Software Developer</i>	Aug 2024 – May 2026 <i>Hyderabad, India</i>
– Backend Service Development: Designed and maintained enterprise backend services and RESTful APIs supporting insurance policy administration, customer management, and business workflow automation. Applied layered architecture principles, dependency injection, and reusable service components to improve maintainability and scalability. – Advanced Search & Data Retrieval Engine: Developed a dynamic multi-criteria search solution supporting partial and composite searches across customer, policy, and transaction datasets. Implemented optimized retrieval strategies to improve search performance and user experience for business operations. – AI-Powered Document Processing Automation: Engineered an automated document ingestion workflow integrating with external AI/ML services to extract structured information from inbound emails and documents. Built transformation pipelines to convert extracted data into standardized JSON payloads for downstream systems. – Production Support & Software Delivery: Performed root-cause analysis for production incidents across application and database layers. Collaborated with stakeholders on change requests, effort estimation, feature implementation, deployment activities, and Agile software delivery processes.	

Projects

Sniper – Agentic AI Penetration-Testing Platform	Group Hackathon Project
– Agentic Pipeline Architecture: Built an AI-driven pentesting platform in Python, FastAPI, and LangGraph, where an LLM-orchestrated agent plans and drives a 10-phase assessment. – Security Tool Orchestration: Integrated 20+ real security tools (Nmap, OWASP ZAP, Nuclei, Nikto, sslyze) as isolated, on-demand Docker containers, with live log streaming to the UI over Server-Sent Events. – Multi-Provider LLM Resilience: Designed a custom automatic API-key rotation and failover system spanning multiple LLM providers (OpenAI, Groq, Gemini), so long-running scans survive individual provider rate limits without manual intervention. – Full-Stack Observability: Instrumented the entire pipeline with OpenTelemetry and a self-hosted SigNoz stack, building custom dashboards, alert rules, and distributed tracing across every LLM call, tool execution, and pipeline phase. – Operator UI & Reporting: Built a React/TypeScript operator dashboard with live scan visibility and multi-format report generation (PDF, DOCX, HTML, MD, JSON) for security findings.	

HomeHub – Society Management Platform

Solo-built, Freelance

- **Multi-Role Backend Architecture:** Built a society management platform using Spring Boot, MongoDB, and Firebase, serving four roles – Supervisor, Resident, Security Guard, Visitor. Implemented modular services, DTOs, validation, and centralized exception handling.
- **Visitor Access & Notification System:** Developed visitor entry approval via Firebase in-app notifications and Twilio WhatsApp alerts. Enabled residents to pre-issue advance visitor passes shared directly with visitors.
- **Dues & Maintenance Workflow Engine:** Built supervisor tools to raise dues for single or grouped flats, and a maintenance request module allowing residents to raise and both roles to track issue lifecycle status.
- **Reporting & Analytics:** Implemented downloadable reports covering residents, visitors, recurring visitors, flats, security guards, and per-flat resident history for administrative oversight.
- **Mobile App & Auth:** Built the Flutter mobile client with BLoC state management and Firebase Auth-based mobile number verification, integrated with WhatsApp workflow automation.

Achievements

Code4Odisha Hackathon: Ranked **Top 5** among 200+ participants.

HackerWar 4.0: Winner among 71 teams

Education

Siksha 'O' Anusandhan University

B.Tech in Computer Science & Engineering **GPA: 8.1/10**

2020 – 2024

Bhubaneswar, India
