

Jiteen Mohanty

Software Engineer | Full Stack Java Developer | Spring Boot • REST APIs • Microservices • React

📞 +91-9348051139 ✉️ jiteen.dev@gmail.com [in LinkedIn](#) [🌐 Portfolio](#)

Professional Summary

Software Engineer with 2+ years of experience developing enterprise backend applications, REST APIs, database solutions, and business process automation systems. Strong expertise in SQL optimization, data processing workflows, API development, and software engineering principles. Hands-on experience building Java Spring Boot applications, implementing secure RESTful services, workflow-driven systems, and scalable backend architectures. Passionate about backend engineering, distributed systems, and modern Java technologies.

Technical Skills

Languages	Java, SQL, JavaScript, Dart
Core Java	OOP, Collections Framework, Streams API, Exception Handling, Java 8+ Features
Backend & Frameworks	Spring Boot, Spring MVC, REST APIs
Frontend	React, React Hooks, Component Architecture, REST API Integration
Databases	SQL Server, Oracle, MySQL, MongoDB
Database Engineering	Stored Procedures, Query Optimization, Indexing, Execution Plans
Tools	Maven, Git, GitHub, Postman, SSMS, Oracle SQL Developer
Methodologies	Agile/Scrum, SDLC, Code Reviews, AI-Assisted Development

Professional Experience

Hansa Solutions

Associate Software Developer

Aug 2024 – May 2026

Hyderabad, India

- **Backend Service Development:** Designed and maintained enterprise backend services and RESTful APIs supporting insurance policy administration, customer management, and business workflow automation. Applied layered architecture principles, dependency injection, and reusable service components to improve maintainability and scalability.
- **Advanced Search & Data Retrieval Engine:** Developed a dynamic multi-criteria search solution supporting partial and composite searches across customer, policy, and transaction datasets. Implemented optimized retrieval strategies to improve search performance and user experience for business operations.
- **AI-Powered Document Processing Automation:** Engineered an automated document ingestion workflow integrating with external AI/ML services to extract structured information from inbound emails and documents. Built transformation pipelines to convert extracted data into standardized JSON payloads for downstream systems.
- **Database Engineering & Performance Optimization:** Developed complex SQL queries, stored procedures, and database scripts across SQL Server and Oracle environments. Improved application performance through indexing strategies, execution-plan analysis, query optimization, and parallel query execution, reducing response times by approximately 35%.
- **Production Support & Software Delivery:** Performed root-cause analysis for production incidents across application and database layers. Collaborated with stakeholders on change requests, effort estimation, feature implementation, deployment activities, and Agile software delivery processes.

Projects

AI-Powered Claims Processing Platform

Jan 2026 – Apr 2026

- **Microservices Backend Architecture:** Designed and developed an AI-powered insurance claims platform using Spring Boot, REST APIs, PostgreSQL, MongoDB, and RabbitMQ. Implemented modular service architecture with controllers, services, repositories, DTOs, validation, and centralized exception handling.
- **Authentication & Access Management:** Built a centralized authentication service using Spring Security and JWT-based authentication. Implemented role-based access control (RBAC) supporting Policyholders, Claims Adjusters, Investigators, and Administrators.
- **AI Claims Processing Workflow Engine:** Developed workflow-driven modules for claim submission, document verification, fraud analysis, claim assessment, approval processes, and lifecycle-based status tracking across the claims ecosystem.
- **Document Processing & Notification System:** Integrated AI-powered document processing services and event-driven messaging to automate data extraction, claim validation, real-time notifications, and stakeholder communication workflows.
- **Data Management & System Design:** Designed data models for claims, policies, users, documents, and audit records while independently managing architecture design, development planning, testing, and technical documentation.

Education

Siksha 'O' Anusandhan University

B.Tech in Computer Science & Engineering

GPA: 8.1/10

2020 – 2024

Bhubaneswar, India
